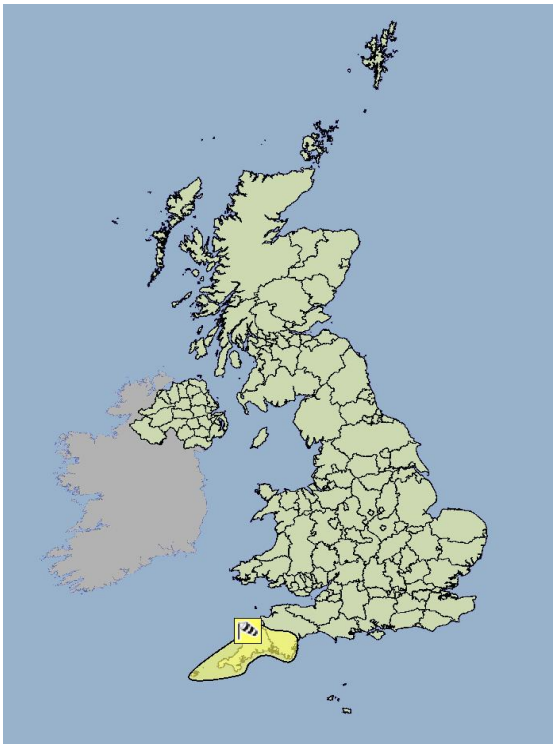
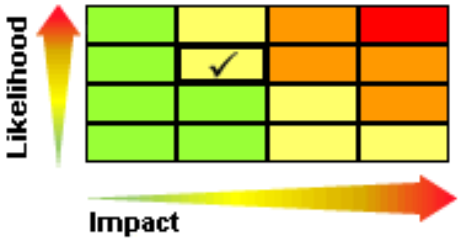
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of Low Pressure is expected to deepen in the Southwest Approaches overnight Saturday into early Sunday morning, bringing strengthening south to southeasterly winds along with a band of persistent, and at times heavy rainfall.

There is currently good confidence in the overall timing and location of the strengthening winds, but less certainty surrounding the location of the heaviest rainfall. Additionally, the strong winds coincide with high spring tides which will lead to some large waves and spray affecting coastal areas exposed to the south.

This warning will be kept under review and updated as necessary in the light of new information.

The Met Office have issued a **Yellow Alert** of **Wind**

Valid from **05:00 on Sun, 10th Apr 2016** until **12:00 on Sun, 10th Apr 2016**

Strong winds are expected to affect the far southwest of England on Sunday, with gusts of 45-55 mph quite widely inland, locally 60 mph particularly on exposed coastlines and hills. The strong winds will accompanied by a band of rain, which may be heavy and persistent at times.

The public should be aware of difficult driving conditions with the potential for a combination of strong winds and spray on roads, with a likelihood of some minor travel disruption.
